

OMVC Unveils Mobile DTV at CES 2009

Coming soon to cellphones: Free, over-the-air TV

By David Lieberman USA TODAY
Millions of consumers by year's end should be able to watch free, over-the-air television on cellphones, PDAs

wood will display mobile reception to receive news, a document. More on this, and the process by which a mobile DTV device remains digitally independent of the network, is covered in our feature on the new LG V-series, which will be the first mobile DTV device to be available to consumers in the U.S. in the next few weeks. In our feature on the new LG V-series, we explore how the device will be able to receive over-the-air TV signals, and how it will be able to receive over-the-air TV signals, and how it will be able to receive over-the-air TV signals.

Mobile DTV Is Ready To Roll Into CES

By STEPHAN LUTZ

he, you had to connect yourself and antenna to receive news, a document. More on this, and the process by which a mobile DTV device remains digitally independent of the network, is covered in our feature on the new LG V-series, which will be the first mobile DTV device to be available to consumers in the U.S. in the next few weeks. In our feature on the new LG V-series, we explore how the device will be able to receive over-the-air TV signals, and how it will be able to receive over-the-air TV signals.

63 TV Stations Pledge Mobile DTV Support

By GREG TARE

LAS VEGAS — International CES attendees are helping push for the pending Mobile DTV standard by signing the Mobile DTV Pledge. The pledge is a commitment to support the standard and to provide a path for consumers to receive over-the-air TV signals.

Mobile DTV

Overseas, the standard will deliver standard definition video to mobile devices. In the U.S., the standard will deliver high definition video to mobile devices. The standard will also support the delivery of interactive services to mobile devices. The standard will also support the delivery of interactive services to mobile devices.
